*** Notes of Significance ***																	
Fires highlighted in yellow have submitted a final ICS-209																	

Evening Brief

Date Stamp: Tuesday July 11, 2017

Weather Summary

Monsoon moisture continues across the southern and eastern Great Basin producing scattered showers and wet thunderstorms across Southern NV, Southern & Eastern UT and the AZ Strip again today and tomorrow. There has been wetting rain across much of this region over the past few days.

Preparedness Levels

Current:

Great Basin	4
National	4

Great Basin Fire Activity (from Irwin): Light Activity

New Fires and Acres: 16 fires for 5,294.75 acres. 98,188 acres large fire growth.

Current Incident Details Todays Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. Of Origin Sage Grouse Habitat

Resources:

- Crews: 22 T1 IHCs in GB: 15 committed, 7 on R&R.
- T2 IMT Team 6 – Chadwick committed to Earthstone fire.
- T2 IMT Team 7 – DeMasters committed to Brianhead fire.
- T2 IMT Team 3 – Rohrer committed to Draw fire.
- T3 IMT Thaler committed to Dry Gulch fire.
- T3 IMT Hecht committed to Roosters Comb.
- Local IA resources are at drawdown for UT and NV.
- GBCC has committed an estimated 142+ type 3, 4, 6 engines.
- 1-T1 and 1-T2 helicopters are available in GACC.

Great Basin Fire Potential Summary

There has been some **moistening** of fuels across southern and eastern UT, the AZ Strip and Southern NV with the recent trend towards wetter showers and thunderstorms in those areas. ERC's are responding more slowly but while high, are on a downward trend in these areas.

Fine fuels, which have been the main contributor to fire spread early this season in the north and west, remain dry across the northern and western areas of the Great Basin. Higher than normal fine fuel loading and continuity exists over the northern half of the Great Basin. ERCs have leveled off in some of these areas, but remain at seasonably high levels.

Sagebrush live fuel moisture has been on a rapid downward trend the past few weeks in most areas, finally reaching near normal mid-summer levels across the northern and western portions of the Great Basin. Thus with the live fuels dropping to these levels, combining with the very dry and abundant cured grasses, we have seen increased fire growth and in some cases extreme fire behavior. This is what we have been warning about for the past several months. Sagebrush live fuel moisture across Central/Southern NV/UT has dropped significantly to below normal and in some areas is approaching record lows.
